

## **CNG Lease Compressors Now Available**

Blue Energy Fuels LLC (BEF) has recently had two of our 25 HP compressor skids come in off of short term leases. Both of these units are “low-time” units and ready for immediate delivery. Both compressors have been mechanically reconditioned. BEF leases these units on a compression lease basis. Depending on your situation they lease for 85 cents to \$1.15 per gge compressed with a 1,000 gge monthly minimum. You will directly pay for your natural gas through your local utility and for the electricity used through your electric provider. Your company would also be responsible for any Federal or State taxes due on the use or sale of CNG.

These compressors do not come with any CNG storage or dispensing equipment. Blue Energy Fuels can lease or sell you both storage and dispensers if you need them. BEF offers both fast-fill and slow-fill dispensers, also storage spheres, tubes and tank baskets.

These units are perfect for a small to medium sized fleet when using the slow-fill method, when using the fast fill dispenser these units will fast fill two medium sized pick-ups per hour with storage. These units are also useful for a back-up system to an existing CNG fuel station. Depending on the size of your gas line and pressure, these units should make about 12 gge per hour and are rated for continuous operation.
